

BDM

Budget DataMart V6

A Budget Model

If you are using the Insight version of Brio, this BDM/Brio document is used as a template for creating data models and queries. It gives you access to the Budget DataMart repository tables and elements.

How to begin:

1. Save this Brio document to your computer
(e.g. your C: drive, or medium of choice)
2. Name it as you see fit
3. Go to the Query section
4. You will need to login/process the report to get the list of tables
 - * This will place you in the Results section
 - * Go back to the Query section and
5. Build your new Query by selecting the table(s) from the list.
6. Auto join has been turned OFF.
 - * To turn it on - From the Query section select
DataModel/Data Model Options....
 - * Check the box Auto join table
7. Once the tables have been joined, drag/drop elements to the request line,
create limits or sorts
8. Save your changes as a BQY file
9. Process the Query
